

Philosophy of Technology

Revised August 2023

Philosophy:

Technological literacy is a key component for our students in today's society as they utilize their God-given abilities to their fullest potential out of glory to Him. This knowledge will include an awareness of our ever-advancing technology, proper etiquette for using this technology in a God-pleasing manner, and proper uses of social media. Technology is considered a tool that facilitates and enhances instruction while also exposing students to real-world skills that will be used in higher education and the workplace. Ultimately, by using technology, our students will be able to follow through with the mission of our school and our Lord's command to "Go and make disciples of all nations," (Matthew 28:19).

Exit Goals:

The students will be able to:

1. Have a working knowledge of how to use computers/tablets and their basic use.
2. Demonstrate a working knowledge of various computer programs and their applications.
3. Make use of proper keyboarding skills.
4. Successfully and safely navigate the internet and locate information.
5. Utilize the internet for communication purposes in a safe manner.
6. Use correctly the intellectual property of others.
7. Use technology in meaningful ways, the most of which is to further Christ's kingdom by making disciples of all nations.
